Systems Integrated, LLC Purchases General Electric's DataViews®

Effective January 1, 2017, Systems Integrated, LLC has acquired the DataViews® division from GE Digital.

DataViews® has been a leader in the dynamic visualization market since 1989. The DataViews® toolkit enables users to create powerful graphical displays for visualizing critical information used to control and monitor real-time processes. The high performance, scalability and platform independence of the DataViews® development toolkit for the visualization of data are the key reasons for its success in building the front-end for control systems. DataViews® visualization software is used by companies worldwide to drive the interface in applications of diverse industries - Transportation, Aerospace, Automotive, Energy, Telecommunications, Facility Management, Process Control and SCADA Automation & Control.

Since 1974, SI has developed systems technology used by some of the largest providers of critical infrastructure in the United States and around the world, including the US government. Our experience includes Supervisory Control and Data Acquisition Systems (SCADA), machine automation, automated test systems, a wide range of embedded real-time monitoring and control systems and traffic control systems. Systems Integrated is a certified minority, woman owned company.

Systems Integrated's **ONSITE**® has utilized DataViews® as the graphical user interface in our control system for decades. Our expertise with the DataViews® products and our interest in expanding and maintaining the longevity of the DataViews® product has led to our purchase decision.

Systems Integrated plans to continue to support, license and enhance the DataViews® suite of products for a minimum of the next 20 years. Systems Integrated understands the investment companies have in their current systems as well as the need to evolve solutions to address the changes in technology, hardware and security. SI is committed to working to sustain customer's current solutions by providing maintenance releases that will ensure the DataViews® toolkit viability on the most recent operating systems revisions for the supported platforms. SI is enthusiastic to deliver product upgrades to expand the feature set of DataViews® to meet the needs of the engineering community using this powerful toolkit. In addition to SI's continued technical support of DataViews®, SI engineers are available to augment your team when developing solutions to problems in a wide variety of industries as a resource to enhance your product's future. We possess the engineering expertise to support your current DataViews® legacy systems, supporting your immediate needs while planning for your future with an updated and expanded toolkit.

Systems Integrated is upholding all current product support contracts. To insure that your current licenses are registered with Systems Integrated, please contact us at 800-738-0929 / 858-810-0725 or at support@systemsintegrated.com. We look forward to working with you to strengthen your product for today and for the future.

Sincerely,

Susan Corrales-Diaz
President
